Designer r29.3 Release Notes

[Download r29.3 Full (Pro)](#)

Full (Pro) build: 220701
Released: July 2nd 2025

New Features

r29.3 brings support for Designer Pro licenses to r29. This will allow users to open r29.3 with either a Designer Legacy License or a Designer Pro License. For more information, see [legacy licenses](#).

This allows projects that include Disguise Solo servers to use Editor machines with Designer Pro licenses.

Improvements

- **DSOF - 29184** – There are now new `writeStageMovie()` and `writeFeedMovie()` endpoints in the Plugins API. You can learn more about our Developer APIs in the [Developer Portal](#).
- **DSOF - 28981** – In d3Net Manager "Pro" range servers have been renamed to "VX" range.
- **DSOF - 23588** – d3Service will now automatically check CodeMeter WebDepot for updated licenses and will update them for you. This will mean that monthly and yearly Pro subscriptions, as well as updates to expiry dates on any legacy licenses, will be updated automatically on your machine without you needing to manually activate a new license each time it renews. License update checks happen every 12 hours, and only if Designer is not running.
- **DSOF - 29305** & **DSOF - 29372** & **DSOF - 29423** – Improve performance of d3service when querying licenses (this should improve d3Manager startup time in most cases).
- **DSOF - 30348** – Designer now has better debug logging to detect issues with bulk modifications of QuickCal Reference Points.
- **DSOF - 29307** – System diagnostics now include a detailed summary of all CodeMeter Container details for easier troubleshooting.
- **DSOF - 29300** – The term "d3" will now appear as "Designer" or "Disguise" in the EULA text.
- **DSOF - 29862** – Solo range servers now correctly report that they are supported up to r29.3.

Fixes

- **DSOF - 29660** – Designer will no longer fail to launch on RX range machines even when they have a valid Designer or Pro license.
- **DSOF - 29315** – System Diagnostics now include more detailed licensing logs for faster diagnostics.
- **DSOF - 4950** & **DSOF - 29613** – Licenses will no longer be incorrectly reported as Perpetual in d3Manager in certain rare cases.
- **DSOF - 30377** – Disguise servers equipped with Bluefish capture cards will no longer excessively log errors in rare scenarios when dropping frames.
