

# Designer r31.3.3 Release Notes

---

## [Download r31.3.3 Full \(Pro\)](#)

Full (Pro) build: 228168

Starter build: 228169

Released: September 17th 2025

## Fixes

- **DSOF - 31183** - Python method `Track.splitSectionAtBeat()` now accepts an optional second argument for specifying the transition setting for the new section, as it did before r31.3. For more information about the `Track` class, please refer to the [Developer Documentation](#).
- **DSOF - 31138** - When switching from a track with a geometric mapping to another track without geometric mappings, Designer no longer reports an Access Violation error. This restores the behaviour prior to r31.3.1.
- **DSOF - 30770, DSOF - 30769** - DMX Channels in the DMXPatch Editor can now be reordered to lower Channels again, as they could be before r31.0. Once reordered, the properties are correctly editable.
