

PROJECTION MAPPING MADE SIMPLE

# Mapping Matter

Mapping Matter is the industry-leading, browser-based 3D tool for complex projection mapping projects of any scale, bridging the gap from early conception to final delivery by simulating ideas in a shared environment.

Create and evaluate accurate scenes with ease, perform photometric analysis to fine-tune your setup, and gain a clear understanding of your projector configuration in just minutes.

Mapping Matter is about to receive a major update, with new functionality including the ability to add LED surfaces into a project, saving different projector and LED tile types, and live multi-user editing.
