

Designer r33.0.2 Release Notes

[Download r33.0.2 Full \(Pro\)](#)

Full (Pro) build: 246160

Starter build: 246161

Released: April 22nd 2026

Items marked with a ● are also included in [r32.4.2](#).

Fixes

- **DSOF - 32538** - [Hold mode](#) (Alt+P) now correctly freezes the last rendered frame on physical outputs, as it did before r32.4.1 and r33.0.1, rather than stretching the top row of pixels across the entire frame.
- **DSOF - 32545** - Resolved an issue where Designer's interface elements were rendered approximately 11% larger than intended. Interface sizing now matches its behaviour before r32.3.
- **DSOF - 32535** - Resolved an issue where d3service could intermittently crash when checking for internet connectivity after Designer had shut down, which previously required a server reboot to recover.
- **DSOF - 32423** - Designer now pre - rolls and chases timecode correctly when using a 29.97 drop - frame source with the Custom Timeline FPS set to Global or Custom. Previously the pre - roll started late and the playhead remained permanently offset from the timecode source.
- **DSOF - 32481** - Looping [FBX animations](#) now play for their full duration before restarting, rather than pausing shortly before the loop point.
- **DSOF - 31802** - [Colour Inspector](#) RGB error values are now calculated correctly regardless of the active output colour space. Previously the 2014 Macbeth colour chart produced very high error values when a non - sRGB output transform was in use.
- **DSOF - 32374** - Designer will no longer intermittently launch in to a Live Update Blocked state with certain video in formats present.
- **DSOF - 32521** - Removing an [OSC output expression](#) while its 'Expression' field is selected now works correctly and no longer reports an error.
- **DSOF - 32549** - Designer now has improved logging for identifying frame drops.
- **DSOF - 32539** - The [Transport Manager](#) timecode dropdown now uses short property labels, restoring the expected dropdown width.
- **DSOF - 32525** - d3service now correctly logs any licences that have been removed during an automatic licence update.
- **DSOF - 32523** - Improved logging about the Designer shutdown process to make troubleshooting shutdown issues easier.
