

Designer r33.1.4 Release Notes

[Download r33.1.4 Full \(Pro\)](#)

Full (Pro) build: 250397

Starter build: 250398

Released: May 27th 2026

Items marked with a ● are also included in [r32.4.7](#).

Fixes

- **DSOF - 32763** - Using **Insert Track** to insert one [Track](#) into another no longer links Cues, MIDI, Notes, and timecode between the source and destination tracks.
- **DSOF - 32875** - [Locked Layers](#) that sit entirely after a region targeted by the **Remove Bars** timeline action now shift backwards along with the rest of the track, instead of staying at their original position and desyncing from surrounding layers.
- **DSOF - 32816** - Pasting a group of layers into a new [Track](#) no longer extends the destination track's duration by the time offset that the group held in its source track.
- **DSOF - 32629** - Changing the [palette](#) of a [Radar Layer](#) to a solid colour gradient now updates the Layer's output immediately. Previously, the radar continued to display as black until you switched tracks and back.
